Tailored
recommendations
by merchant type

Intuitive Communication

Multilingual support
with visual
summaries

Personalization Strategy

Merchant Category

Cuisine-specific insights & competitive analysis

Location Intelligence

City-based benchmarking & regional trends

Business Maturity

Tailored advice based on merchant experience

Operational Strategy

Delivery time optimization & efficiency tips

How It Works

SQL Segmentation

Merchants are grouped using SQL queries. We JOIN and RANK by category, city, and time. This creates the foundation for tailored insights.

ML Clustering

Machine learning identifies business maturity levels. This is based on order volume and tenure. It enables stage-specific guidance.

Prototype Showcase

Real-time Alerting

"Chocolate Brownies selling fast! Only 10 left."

Contextual Tips

"Bundle brownies with smoothies to boost sales by 20%."

Visual Insights

Simple charts showing 68% positive customer feedback

Multilingual Support

Conversations in English, Malay, MandarinApp

Evaluation Alignment

Insight Quality and Relevance

MEX Assistant offers clear actions after alerts. It suggests actions like restock or promotions.

Alerts focus on essential business trends. The system alerts only on important data changes.

Communication Effectiveness

Simple language is used like "Low Stock Alert." Jargon and technical terms are avoided for clarity.

Graphs show sales trends over various periods. Color indicators provide instant understanding.

User Experience and Engagement

The assistant provides a fluent chat experience. For example, the chatbot provides restock suggestions.

The assistant responds quickly to user requests. Real-time shop performance is displayed quickly.

Future Improvements

Cross-platform

Integrate with Grab dashboard (like WhatsApp)

Voice Interface

Hands-free operation during busy hours

Weather Integration

Forecast-based inventory suggestions

Event Planning

Local event-based recommendations
